

## **NOTES FOR THE FINAL EXAM**

The final exam will take place in this room on the evening of 16 June 2011. Exam questions will be drawn from the material covered since the mid-term, weather and earth/space science.

I anticipate the exam will last for 1.25-1.5 hours, after which I will address many of the questions you had in class last week (when Hethyr led the class).

Questions on the final exam will include isoplething, finding frontal boundaries, explaining the greenhouse effect, describing earth/sky relationships such as lunar phases, the reason for seasons, and also describing how you could construct activities to illustrate key concepts that we have covered in the last half of the semester.
