

## NOTES FOR THE MIDTERM EXAM

The mid term exam is a closed book, closed note exam. The exam will cover all material presented in class and assigned for reading.

On the exam, you may be asked:

- To define key terms (such as density, lithosphere)
- To explain how certain processes occur (such as the role of convection in plate tectonics)
- To devise an experiment to do in class (say, to measure the density of an object)

All answers will need to be written clearly, legibly, and completely.
