
Over the past twenty-five years, John Kowka and Lawrence White have given us six excellent editions of The Antitrust Revolution chronicling the development of antitrust economics over this critical period. Each edition contains excellent case studies by leading economists who were involved in the cases and investigations they present. The current edition contains a total of twenty case studies, eleven of which are new. The emphasis remains on the growing complexity and empirical nature of merger cases, but with a substantial number of conduct cases covering virtually all of the key issues in U.S. antitrust law. In addition to the cases covered in the current edition, you can still access the full range of case studies over the life of this extraordinary project at the Oxford University Press website. The full collection of evolving print and electronic case studies represents a marvelous resource for both scholars and practitioners of U.S. antitrust law and economics.
