When to Study Abroad

Health Systems Management students have a fair amount of flexibility when they can study abroad, with sophomore and junior years being the easiest time to plan for study abroad. Students must be on campus their senior year to fulfill their internship major requirement (HSM 360). While core and elective courses are available to students through many programs, students can also potentially petition to take certain HSM equivalent courses abroad. The below programs each offers course that have a global health or health systems focus. It is recommended that students peruse the pre-approved course database, which contains study abroad courses deemed correspondent to core, elective, and major requirements.

Potential Program for Health Systems Management majors:
