This report was written and produced by Loyola’s Center for Criminal Justice Research, Policy and Practice with the support of the John D. and Catherine T. MacArthur Foundation.

Introduction

In December 2016, the Illinois State Commission on Criminal Justice and Sentencing Reform recommended that the Illinois Criminal Justice Information Authority (ICJIA), the State’s criminal justice research and grant-making agency, provide technical assistance to local jurisdictions to form county level Criminal Justice Coordinating Councils (CJCCs). Loyola University Chicago’s Center for Criminal Justice Research, Policy and Practice has collaborated with ICJIA to support the development of these CJCCs in a number of jurisdictions in Illinois. CJCCs convene elected and appointed executive-level policymakers to collaboratively address issues facing the justice system and its constituent agencies, and use a data-guided and structured planning process to identify, analyze, solve, and manage justice system issues. Although Cook County does not have a formal Criminal Justice Coordinating Council, there are a number of collaborative efforts underway that are bringing together justice policy makers, practitioners and other groups to address specific issues within Cook County’s justice system.
This report was developed by Loyola University Chicago to provide criminal justice practitioners, policy makers, community organizers and members of the general public with an understanding of how the adult criminal justice system is organized, how it functions, and how each component of the system is interrelated to the others. The data utilized in this report come exclusively from data and information available through state-level reporting mechanisms in Illinois, and thus allow for some comparisons to other jurisdictions in Illinois. While more current, and more detailed data are available locally, part of the current effort is to better understand the utility of these state-level data for planning purposes.

**Cook County’s Criminal Justice System**

With an estimated 5,180,493 residents in 2018, Cook County is the largest county in Illinois and one of the largest in the United States.¹ Cook County has more than 150 cities, towns and villages.² Chicago is by far the largest city in Cook County, accounting for 52% (2,705,994 residents) of the entire population in 2018. Indeed, Chicago is the largest city in Illinois and the third most populous city in the United States. The next most populated cities in Cook County are Cicero (81,597 residents), Evanston (74,106 residents) and Schaumburg (73,509 residents). The criminal justice system in Cook County can be generally divided into three major components: law enforcement and policing, the courts, and corrections. Within each of these general components are a number of different agencies, operating with specific goals and purposes, and also operating across different branches and levels of government.

**Law Enforcement & Policing**

When crimes are reported to the police, or when police observe criminal behavior during the course of patrol or investigations, the arrest of an individual is the starting point for the rest of the justice system and impacts the workload and activities of all of the other justice system agencies in Cook County. In terms of law enforcement and policing, the majority of policing services are provided by city and municipal police departments, with the Cook County Sheriff’s Office also providing policing services to unincorporated areas of the county as well as to specific towns in Cook County (e.g., Ford Heights). The County Sheriff also provides security for the courts and operates the county jail. In total, there are 141 police departments in Cook County, with Chicago being the largest of these. Most of Cook County’s cities, villages and towns operate their own police departments, and each municipal police department has a chief of police, appointed by the mayor of each city. The Cook County Sheriff’s Office is led by an elected Sheriff. In addition to these municipal and county police agencies, there are a number of other police departments with very specific jurisdictions, such as university police departments and the Union

---

¹ Population estimates were generated using American Factfinder, which relies on the U.S. Census Bureau, American Community Survey data.
Pacific Railroad Police Department, as well as a variety of federal law enforcement agencies. Finally, there are also a number of multi-jurisdictional policing task forces that operate in the Cook County area that involve cooperation and resource sharing amongst federal, state and local law enforcement agencies, as well as private companies, to address specific types of crime (e.g., violent crime, financial crime).

**Courts**
When an individual is arrested in Cook County, in most instances their case is referred to the Cook County State’s Attorney’s Office, which is led by an elected State’s Attorney. Each county in Illinois has a separately elected State’s Attorney. The Cook County State’s Attorney’s Office reviews arrest reports by the law enforcement agencies in Cook County to determine if criminal charges should be filed in court, and if so, they initiate a criminal case by filing a case with the Office of the Cook County Clerk of the Circuit Court. For some specific types of arrests—including misdemeanor arrests and arrests for felony drug-law violations—police directly file charges with the Clerk of the Circuit Court. The case is then adjudicated within the Cook County Circuit Court. Illinois has 23 separate judicial circuits. Some, such as Cook County, include single counties, while other circuits include multiple counties. Within each judicial circuit are elected Circuit Court Judges and appointed Associate Judges. It is within these circuit courts that criminal cases are adjudicated. Each judicial circuit is led by a Chief Judge, selected by and from the Circuit Court Judges within the judicial circuit. In Cook County, the President of the County Board appoints a Public Defender, who oversees the Cook County Public Defender’s Office, an agency responsible for providing legal services to indigent persons arrested and charged with crimes in Cook County. In other judicial circuits in Illinois, the Public Defender is appointed by the Circuit Court judiciary. The Cook County Circuit Court is the only judicial circuit in Illinois’ First Appellate District and hears cases on appeal from the circuit court. Finally, the Cook County Sheriff’s Office provides security to the Cook County courts, both in the courthouses across the county as well as in the individual courtrooms.

**Corrections**
The corrections component of the criminal justice system includes both institutional and community-based correctional agencies responsible for supervising and detaining those charged with crimes as well as those convicted of offenses. These agencies have varying functions and operate at different levels and branches of government. For example, the Cook County Sheriff’s Office operates the Cook County Jail, which serves multiple functions. For those individuals who cannot post or who are denied bail during their bond court appearance, the Cook County Jail serves as a pre-trial detention facility.
Individuals can also be sentenced to serve time (less than a year) in the Cook County Jail upon conviction. Individuals convicted of a felony-level offense can be sentenced either to supervision in the community (probation) or to prison (for a year or more), depending on the nature of their offense. Offenders sentenced to probation in Cook County are supervised and referred to services by the Cook County Adult Probation Department (primarily felony probation cases) or the Cook County Social Services Department (primarily cases involving misdemeanors). The Adult Probation and Social Services Departments are funded through a mix of county and state resources, and are under the judicial branch of government. When a sentence to probation is imposed, the individual is supervised in the community by probation officers. In addition to supervision, the conditions of probation often include payment of fines, restitution, probation supervision fees, as well as participation in rehabilitative programs. If individuals on probation fail to meet the terms of their probation or commit a new crime while under supervision, their probation may be revoked and a more severe sentence, such as prison or jail time, may be imposed.

If someone convicted of a felony in Cook County is sentenced to prison, upon the imposition of that sentence the individual (if male) is transferred by the Cook County Sheriff’s Office to the Illinois Department of Corrections (IDOC) Reception and Classification (R&C) Center at the Stateville Correctional Center in Crest Hill, Illinois. Adult females are transferred by the Sheriff’s Office to the Logan Correctional Center R&C in Lincoln, Illinois. After inmates have been processed through the R&C, they are then transferred to one of Illinois’ 27 prisons based on their security classification and needs.

Inmates then serve their prison sentences, and upon release, are supervised in the community under Mandatory Supervised Release (MSR, “parole”) by parole officers that work for IDOC. Under Illinois’ sentencing structure, inmates are released from prison after they have completed serving their court-imposed prison sentence, minus any sentence credits they may receive for time served in pre-trial detention, good conduct credits, or credits to their sentence for completing rehabilitative programming while in prison. Thus, while the Illinois’ Prisoner Review Board (PRB) sets the conditions of MSR (e.g., requirements to participate in programming in the community), under Illinois law they do not have the authority to determine whether or not someone should be released from prison. Individuals released from prison must have an approved host site where they will live, and most return back to the community where they lived before going to prison. The length of time individuals are supervised on MSR is set by state statute and corresponds to the felony class of the crime for which they were sentenced to prison, generally ranging from 1 year (for Class 3 and 4 felonies) to 3 years (for Murder and Class X felonies). For sex offenders, their MSR period is indeterminate, with a minimum of 3 years and up to lifetime supervision. Those sentenced to prison for domestic violence offenses are supervised on MSR for 4 years. If during the period of MSR an individual violates the conditions of their supervision set by the PRB, or is rearrested for a crime, their MSR can be revoked and they can be returned to prison to serve out a portion, or the remainder of, their MSR period.
Reported Crime and Arrests in Cook County

To understand how the justice system responds to crime in Cook County, it is first important to understand how much crime occurs and the number of individuals subsequently arrested. Importantly, research conducted by the U.S. Department of Justice reveals that not all crime occurrences in the United States are reported to the police. For example, the 2018 National Crime Victimization Survey (NCVS) estimates that 57% of serious violent crimes and 66% of property crimes were not reported to the police. Reporting variations also exist within large crime categories (e.g., violent and property). Nationally, the majority of thefts (property) and sexual assaults (violent) are not reported to the police while the majority of motor vehicle thefts (property) and robbery (violent) are reported. Thus, when considering how much crime is reported to the police it is important to keep in mind that this represents only a portion of the crime that actually occurs.

One of the primary ways crime in communities is measured is through a reporting system called the Uniform Crime Reporting (UCR) program, whereby individual law enforcement agencies report specific data to the Illinois State Police. These data include information about the number and type of crimes reported to the law enforcement agency as well as the number and type of arrests made by the agency. Although not exhaustive of all crimes, a Crime Index, consisting of eight crimes that are considered to be the most serious and consistently defined across jurisdictions in the United States, has been used since the 1930s. Specifically, there are four crimes used to calculate a Violent Crime Index: murder, rape (termed in Illinois as criminal sexual assault), robbery and aggravated assault/battery. In addition, there are four crimes used to calculate a Property Crime Index: burglary, larceny/theft, motor vehicle theft, and arson. Combined, these violent and property Index offenses are used to compute the total Crime Index. Violent and property Index offenses usually come to the attention of the police through reports by crime victims, and are consistently defined across the country. However, there are also a number of other crimes that are often only detected by the police, or legally defined differently across the country, such as drunk driving, drug sales and possession, and illegal possession of firearms. Thus, there are many common offenses that are not part of the crime Index because they go unreported to the police or because their legal definition varies significantly across states, rendering meaningful comparison difficult.

3 See https://www.bjs.gov/content/pub/pdf/cv18.pdf for a detailed description of the National Crime Victimization Survey.
4 See https://www.ucrdatatool.gov/ for a detailed description of the Uniform Crime Reporting Program.
5 In 2014 the crimes of Human Trafficking-Commercial Sex Acts and Human Trafficking-Involuntary Servitude were added to the Crime Index. In 2018, 17 offenses and 8 arrests under these two categories were reported in Cook County through the UCR program.
Crimes Reported in Cook County

In Cook County, the majority (82% between 2005 and 2018)\(^6\) of all Index crimes reported to the police in both suburban Cook County and Chicago involved property crimes (Figure 1), a pattern similar to jurisdictions in Illinois outside of Cook County.\(^7\) Because property crimes account for such a large portion of all Index crimes reported to the police, trends in property Index crime tend to influence the total Index crime rate in Cook County. Between 2010 and 2018, the number of property Index crimes reported to the police in Cook County decreased 29% (Figure 2), a trend similar to Illinois outside of Cook County.\(^8\) During that same time period property crimes decreased in Chicago by 28% and suburban Cook County by 33%. In 2018, the property Index offense rate in Cook County was 2,476.8 per 100,000 residents, or 73% higher than the rate of 1,433.0 per 100,000 residents in Illinois outside of Cook County that year. In 2018, Chicago accounted for 68% of all property Index crimes reported to the police in Cook County. The 2018 property Index offense rate in Chicago was 3,197.7 per 100,000 residents, compared to 1,683.4 per 100,000 in Suburban Cook County.

\(^7\) In Illinois outside of Cook County, property crime accounted for 87% of all reported Index crime from 2005 to 2018. Source: Illinois State Police Annual Report. Analyses of published aggregate I-UCR data Compiled by ICJIA by Loyola’s Center for Criminal Justice Research, Policy and Practice.

\(^8\) Between 2010 and 2018, in Illinois outside of Cook County the number of property Index crimes decreased by 35%. Source: Illinois State Police Annual Report. Analyses of published aggregate I-UCR data Compiled by ICJIA by Loyola’s Center for Criminal Justice Research, Policy and Practice.
Although violent Index crimes account for a relatively small proportion (18% between 2005 and 2018 [Figure 1]) of all Index crimes reported to the police in Cook County, these involve the most serious offenses the justice system handles, including murder, robbery, aggravated assault and battery, and criminal sexual assault. Between 2010 and 2018, the total number of violent crimes reported to the police in Cook County decreased 10% (Figure 3),\(^9\) while a larger decrease was seen in Illinois outside of Cook County during that period (20% decrease). Between 2010 and 2018, violent crime in suburban Cook County decreased 18%, while violent crime in Chicago decreased 8%. In 2018, the violent Index offense rate in Cook County was 613.8 per 100,000 residents, or just over double the rate of 245.9 per 100,000 residents in Illinois outside of Cook County that year. In 2018, Chicago accounted for 86% of all violent Index crimes reported to the police in Cook County.\(^{10}\) In 2018, the violent Index crime rate in Chicago was 1,006.1 per 100,000, compared to 182.1 per 100,000 in the rest of Cook County.

\(^9\) Between 2015 and 2016 there was a 20% increase in the number of violent Index offenses reported to the police in Cook County. Almost all of this increase occurred in Chicago, and 30% of this increase came from four specific police districts in Chicago (the 6th, 9th, 10th and 11th districts).

Arrests in Cook County

When crimes are reported to the police, or when police observe criminal behavior during the course of patrol or investigations, the arrest of an individual is the starting point for the rest of the justice system and impacts the workload and activities of all of the other justice system agencies in Cook County. There are a number of factors that can influence the number and rate of arrests, including the amount of crime, the nature of crime and victimization, and what police departments and officers focus their resources and attention towards. For example, there will likely be fewer arrests if crime decreases. However, if more crimes are reported, but police have little evidence to work with or victims are unable to provide the police with information regarding the perpetrators, making arrests will be more difficult and the arrest rate may not significantly increase. Finally, if there are specific criminal behaviors that the public demands the police “do something about,” such as visible signs of drug activity, prostitution, or drunk driving, the police may increase their attention toward these offenses in response to these expectations from the public, resulting in dramatic increases in arrests for some crimes, even if the actual amount of crime has not increased.

Between 2010 and 2018, the trends in arrests in Cook County for property and violent Index crimes have generally mirrored the number of these offenses reported to the police (Figure 2 and Figure 3). The number of both violent and property index offenses were dropping steadily until 2015, at which
point both increased between 2015 and 2016, while the number of violent and property arrests continued dropping steadily through 2018. Thus, these data suggest that the proportion of both property and violent offenses that result in an arrest is shrinking. Reported property Index offenses decreased 29% between 2010 and 2018, while arrests for property Index offenses fell 38%. On the other hand, reported violent Index offenses decreased 10% between 2010 and 2018, but arrests for these offenses fell about 30%. While measuring crime clearance rates with just aggregate offense and arrest data has a number of limitations, comparing the number of reported offenses that result in an arrest to the total number of those crimes can provide a rough measure of how effective police are at solving crimes. While clearance rates for property crimes and violent crimes are noticeably lower in Cook County versus the rest of Illinois, this difference is greatest with violent crimes. In 2018, approximately 16% of all violent crimes reported to the police resulted in an arrest, and approximately 15% of reported property crimes resulted in an arrest in Cook County. By comparison, in Illinois outside of Cook County, the “clearance rate” for violent crime was 44%, while the property crime “clearance rate” was 22% that same year. Thus, the “clearance rates” for both property and violent crimes is lower in Cook County than in the rest of Illinois combined. These differences in the clearance rate may be due to differences in the nature of the violent Index crimes (i.e., the degree to which victim and offender know each other) as well as other factors across the regions, which impacts the ability to arrest suspects.

In addition to utilizing aggregate data reported through the Uniform Crime Report (UCR) program, it is possible to examine trends in arrest and characteristics of arrestees in more detail by using information collected during the processing of an individual through the justice system. In Illinois, when law enforcement agencies carry out a custodial arrest (an arrest that involves the fingerprinting of an individual), specific information about that arrest is reported to the Illinois Criminal History Record Information (CHRI) system, which comprises the criminal history record for each individual arrested in Illinois and is maintained by the Illinois State Police. The advantage of this information is that it contains information on arrests for all crimes,\(^{11}\) and is not restricted to only the Index offenses. Further, unlike the aggregate UCR data, the CHRI data contains information regarding the age, race and gender of the arrestee, allowing for a better understanding of the characteristics of those arrested in Illinois.

The CHRI data reported to the Illinois State Police by law enforcement agencies in Cook County reveal similar trends to the Index crime arrest data. Between 2010 and 2018, arrests for all violent crimes (not just the Index offenses) decreased 28%, while arrests for all property crimes fell 30% and arrests for all drug-law violations combined decreased 59%.\(^{12}\) Although arrests for drug-law violations decreased across all categories of offenses, the decrease was much larger for violations of the Cannabis Control

---

\(^{11}\) State regulations require that police agencies submit arrest fingerprint cards to ISP within 24 hours of an arrest for all felony and Class A and B misdemeanor offenses. These contain not only the fingerprints of arrestees, but also arrestee demographic and arrest charge information.

\(^{12}\) Source: Analyses by Loyola’s Center for Criminal Justice Research, Policy and Practice of Criminal History Record Information (CHRI), generated by ICJIA.
Act (78%) than for the Controlled Substances Act (34%) (which covers all drugs other than cannabis). In fact, decreases in arrests were seen across almost all crime categories between 2010 and 2018, with the exception of arrests for weapon offenses (i.e., illegal gun possession), which increased 35%.

Under Illinois law, crimes are classified as either misdemeanors or felonies. From a legal standpoint, felony offenses are more serious since a conviction for these offenses can result in a prison sentence, and a felony conviction has potentially significant implications for employment, housing, and eligibility for various government services. When arrest trends were examined specifically to differentiate between misdemeanor versus felony offenses, different patterns were evident. Although arrests for both felonies and misdemeanors decreased between 2010 and 2018, the decrease in arrests for misdemeanor crimes was slightly larger (down 35%) than the drop in felony arrests (down 23% [Figure 4]).

Further, the decrease in arrests for the least serious felony classes (Class 3 or 4 felonies) was larger (down 28%) than the drop in arrests for the more serious felony classes (Class 2 or higher felonies) (down 11%). For some crimes, whether the offense is a felony or a misdemeanor depends on specific characteristics of the arrestee, the victim or the crime that may not be known at the time of the arrest (e.g., prior convictions for similar offenses), and thus are classified at the point of arrest as “other” or “unknown.” Arrests classified as “other” or “unknown” dropped 58% from 2010-2018.

Figure 4. Arrests in Cook County, by Crime Class

Source: Analyses by Loyola’s Center for Criminal Justice Research, Policy & Practice of CHRI data generated and provided by the Research and Analysis Unit, Illinois Criminal Justice Information Authority.

13 Source: Analyses by Loyola’s Center for Criminal Justice Research, Policy and Practice of Criminal History Record Information (CHRI), generated by ICJIA.
Another apparent trend in the characteristics of arrests in Cook County is that a substantial portion of the decrease in arrests between 2010 and 2018 was the result of fewer arrests of younger adults, specifically those between the ages of 18 and 24. This population is often referred to as “emerging adults” because, despite having reached social and legal adulthood, research has shown that cognitively this age group still tends to exhibit immaturity when it comes to impulsivity and decision making.\(^{14}\) Between 2010 and 2018, the total number of arrests involving 18-24 year olds declined 51%, while those involving adults 25 and older declined by 34%. The 2018 arrest rate of 18 to 24 year olds in Cook County was 774.8 arrests for every 10,000 residents in that age group, 49% lower than in 2010. By comparison, the arrest rate of 25 to 44 year-olds fell by 33% during the same time period. In 2018, the arrest rate of 25 to 44 year-olds in Cook County was 467.0 per 10,000 residents in that age group (almost 39% lower than the arrest rate of the “emerging adults”). Finally, the arrest rate in Cook County of those over the age of 44 was relatively low when compared to younger age groups. In 2018, 134.8 per 10,000 residents over the age of 44 were arrested, a 33% decrease since 2010.

Arrests in Cook County were also analyzed by race, however, during the time period examined changes were made to how race was reported through CHRI. Specifically, since 2015, agencies have had the option of reporting Hispanic as a unique category within the race field in CHRI. Prior to 2015, there was no ability in CHRI to indicate that the arrestee was Hispanic, and these arrests were primarily recorded as “white.” Thus, the ability to examine trends over time in the racial composition of arrestees is limited to just the 2015 to 2018 period. Overall, from 2015 to 2018, the total number of arrests reported through CHRI in Cook County decreased 20%, whereas the percent decrease for non-whites was 19% and for whites was 24%. However, while the percent change in arrests was similar for non-whites and whites between 2015 and 2018, non-whites accounted for the majority of arrests. Specifically, 82% of the total arrests in 2018 in Cook County were accounted for by non-whites. In terms of the gender of those arrested, from 2010 to 2018, arrests decreased for both men (down 41%) and women (down 32%), and the proportion of arrestees in Cook County accounted for by men remained fairly constant, around 81%.

It is also possible to examine the long-term trends in arrests for drug-law violations with data reported to the UCR program in Illinois. These analyses are useful to illustrate how public expectations for police to address specific issues can result in large increases in arrests for specific crimes. During the 1980s, concern was raised at the national level about the dangers of drug use and the illicit drug market, and the prevailing view was that an appropriate response to this behavior and market would be to increase enforcement efforts and focus on this behavior. The response at the local level across most cities in the United States was to increase the enforcement of drug-laws, particularly those involving substances other than marijuana, such as cocaine, heroin and methamphetamine.

In Illinois, the illegal possession and sale of these substances are articulated in Illinois’ Controlled Substances Act, while offenses involving marijuana are classified under the Cannabis Control Act. Importantly, almost every offense under Illinois’ Controlled Substances Act is a felony-level offense, and thus is subject to a possible prison sentence upon conviction. Arrests for violations of Illinois’ Cannabis Control Act, on the other hand, are primarily classified as misdemeanor offenses.\textsuperscript{15}

In Cook County, arrests for violations of the Controlled Substances Act increased dramatically during the late 1980s and early 1990s (Figure 5), and fueled a significant amount of the increases in the workload and activities of other criminal justice agencies in the county during that period. For example, in 1985 there were approximately 10,000 arrests in Cook County annually for violations of the Controlled Substances Act. However, by 2000, more than 45,000 arrests were made in Cook County for offenses under this Act—a 352\% increase. Following this peak in arrests for the Controlled Substances Act in 2000, arrests for these offenses decreased, falling 70\% between 2000 and 2018, when they totaled approximately 13,800. By comparison, Illinois outside of Cook County saw a 24\% increase in arrests for Controlled Substances Act offenses between 2000 and 2018.

\textbf{Figure 5. Trends in Arrests for Drug-law violations in Cook County}

Source: Analyses by Loyola’s Center for Criminal Justice Research, Policy & Practice of aggregate, published I-UCR data.

\textsuperscript{15} In 2016, Illinois law changed, resulting in the possession of small amounts of cannabis no longer being subject to state criminal penalties, resulting in a dramatic decrease in arrests for violations for the Cannabis Control Act between 2016 and 2018.
Criminal Court Filings and Dispositions in Cook County

When police arrest an individual in Cook County, the Cook County State’s Attorney’s Office reviews the arrest charges, determines if filing charges in the Circuit Court are warranted, and, if so, the appropriate charges to be filed. As described earlier, for some specific types of crimes, police are able to directly file charges. The State’s Attorney’s Office has a great deal of discretion in deciding whether to file a criminal charge and what type and severity of charge to file. Broadly, the circuit courts and Illinois’ criminal law distinguishes between misdemeanor and felony-level offenses, and this classification has implications both for the processes used to handle the cases in court as well as the potential sentences that can be imposed upon conviction.

The total number of cases filed—civil, domestic relations, criminal, quasi-criminal, and juvenile— in Cook County in 2018 was 940,753, 13% (124,077 cases) of which were criminal cases. These criminal cases included felony, misdemeanor, and driving under the influence of alcohol (DUI) cases. Thus, it is important to keep in mind that the proportion of criminal cases handled by the Cook County Circuit Court is a relatively small percent of the overall cases filed and disposed of in the courts.

Misdemeanor court filings in Cook County have historically outnumbered felony filings by an 8 to 1 ratio. However, between 2010 and 2018 the number of misdemeanor filings decreased more than the number of felony filings; misdemeanor cases filings decreased 50% while felony case filings decreased 28%. As a result, the gap between felony and misdemeanor filings has narrowed and misdemeanor filings now outnumber felony filings 4.4 to 1. The rapid decline in misdemeanor case filings in Cook County between 2010 and 2018 can be partly explained by declines in misdemeanor arrests during this time period; between 2010 and 2018, misdemeanor arrests decreased by 35%. It should be noted, however, that the decline in misdemeanor case filings (50%) outpaced the decline in misdemeanor arrests (35%) and was larger than the decrease seen in Illinois outside of Cook County, where misdemeanor filings decreased 37% between 2010 and 2018.

The long-term trend in the number of felony cases filed in Cook County reveals a large and steady increase in felony filings during the 1980s, and 1990s consistent with increases in crime and arrests in the 1980s and 1990s, and increases in arrests for felony drug-law violations (Figure 6). Between 1987 and the peak in 1995, felony filings in Cook County increased 159%—from 18,503 to 47,880. During the more recent period, between 2010 and 2018, felony filings in Cook County decreased 28%. Felony arrests in Cook County also decreased by 23% during this time. Statewide, felony case filings remained relatively stable, decreasing just 8% between 2010 and 2018.

Of the felony cases filed in Cook County each year, the majority result in the defendant being convicted. During 2018, 82% of the felony defendants in Cook County who had their cases disposed of were convicted of a felony offense, a rate higher than Illinois outside of Cook County. Most of the felony cases that did not result in a conviction were dismissed by the State’s Attorney’s Office, usually because it was determined there was not sufficient evidence to obtain a conviction, witnesses were not willing to testify, or it was determined that pursuing a conviction was not in the interests of justice. Most of those who were convicted pled guilty to the crime, and very rarely were defendants charged with a felony found not guilty as a result of a trial. Between 2014 and 2018, 94% of all felony convictions in Cook County were the result of a guilty plea, and 7% of all defendants processed through the Cook County court for a felony between 2014 and 2018 went to trial. In 2018, of the felony defendants who opted for a trial – either a jury or a bench trial – roughly 22% were not convicted at trial, a rate slightly lower than Illinois outside of Cook County.

17 Source: Administrative Office of Illinois Courts Annual Report, 2018. Analyses performed by Loyola’s Center for Criminal Justice Research, Policy and Practice. Sixty-nine percent of felony cases disposed of outside of Cook County resulted in a felony conviction.

18 By comparison, in 2018, in Illinois outside of Cook County, 31% of the felony cases disposed of through a trial did not result in a conviction.
Sentencing of Those Convicted of a Felony in Cook County

In Illinois, the possible sentences that can be imposed on those convicted of a felony-level offense are dictated by state statute, with the minimum and maximum allowable sentences to either prison or probation set by state law. In Cook County, unlike most other Illinois counties, the majority of people convicted of a felony offense have been sentenced to prison rather than probation since the early 2000s. Illinois’ felony crimes are grouped into specific felony classes by the Illinois General Assembly, ranging from First Degree Murder, Class X felonies, and then Class 1 through 4 felonies. Class 4 felonies are the least serious felony-level offenses in Illinois, and allow a sentence of up to 30 months of probation or between 1 and 3 years in prison (Figure 7). As the seriousness of the felony conviction offense class increases (i.e., goes from 4 to 1, to X and Murder), the statutorily allowable sentence also increases. All Class X felonies require the imposition of a prison sentence of 6 to 30 years, and all Murder convictions carry a mandatory prison sentence of 20 to 60 years (or longer, up to natural life, depending on specific elements of the crime being present).

There are several different methods that can be used to examine and understand sentencing patterns for felony-level offenses. First is to consider the sheer number of individuals convicted of a felony and sentenced in Cook County. These analyses reveal that, as a result of felony arrests and case filings decreasing between 2010 and 2018 (Figure 4 and Figure 6) the number of sentences imposed on individuals convicted of a felony also decreased 23% during that period, a rate of decrease considerably larger than that seen in the rest of Illinois. Further, when the types of sentences were disaggregated, some shifts in sentencing outcomes emerged. For example, the number of sentences to probation decreased by roughly 10% between 2010 and 2018 while the number of sentences to prison decreased 32% during that period. By comparison, in Illinois outside of Cook County, sentences to probation decreased by 8% from 2010-2018.

19 Excluding Cook County, the number of sentences imposed on persons convicted of a felony in Illinois decreased by 8% from 2010-2018.
decreased less than 1%, and prison sentences fell by 27%. More current data from the Illinois Department of Corrections (IDOC) confirms this trend: between state fiscal years (SFY) 2010 and 2019, IDOC received 46% fewer inmates sentenced from Cook County, falling from 12,974 to 6,944, proportionately larger than the decrease seen in the rest of Illinois.\textsuperscript{20} In fact, the admissions to IDOC from Cook County in SFY 2019 (6,944) was the lowest number since 1989 (Figure 8). In the mid-1990s, sentences to prison from Cook County accounted for two-thirds of the statewide admissions to IDOC, but by SFY 2019, less than one-half (44%) of statewide prison sentences came from Cook County.

More detailed analyses of data provided by IDOC reveals that a decrease in sentences to prison for drug-law violations and property crimes accounts for almost all of the 2010 to 2019 decrease in prison sentences from Cook County. Indeed, as a result of large decreases in admissions to prison from Cook County for drug-law violations and property crimes, combined with a stable trend in admissions for violent crimes and a 23% increase in admissions for weapon offenses (e.g., illegal possession of firearm), the percent of prison admissions accounted for by violent offenses and weapon offenses has increased. For example, between SFY 1999 and 2008, less than 25% of all sentences to prison from

\textsuperscript{20} IDOC received 34% fewer inmates sentenced from Illinois outside of Cook County between SFY 2010 and 2019.
Cook County were for violent offenses or weapon offenses, but by SFY 2019, 49% of all sentences to prison from Cook County were for these offenses.

Further, fewer admissions to prison from Cook County for felony convictions related to Illinois’ Controlled Substances Act (i.e., drugs involving substances other than marijuana) accounted for 39% of the overall decrease in sentences to prison from Cook County between 2010 and 2019. The decrease observed in arrests for felony-level cases involving the Illinois’ Controlled Substances Act contributed to the 39% decrease observed in prison admissions for this crime. Between 2010 and 2018 there was a 36% decrease in arrests for this crime in Cook County. The changes in admissions to prison from Cook County also illustrate how changes in arrests in specific communities can have broad impacts on the entire justice system. For example, it is estimated that the decrease in felony drug arrests in 3 specific police districts in Chicago between 2001 and 2019 is responsible for 30% of the \textit{statewide} decrease in total admissions to prison during that period.

Another way to examine the sentencing patterns for those convicted of a felony offense is to examine the \textit{percent} of those convicted of a felony (i.e., eligible to be sentenced to prison) that receive a prison sentence. Doing so reveals that while the overall \textit{number} of prison sentences decreased between 2010 and 2018, the \textit{proportion} of persons convicted of a felony in Cook County who were sentenced to prison also decreased. For example, between 2010 and 2018, the percent of individuals convicted of a felony that were sentenced to prison in Cook County decreased from 56% to just under 50% (49.5%) (Figure 9). In Illinois outside of Cook County, the percent of persons convicted of a felony sentenced to prison

\begin{footnotesize}
\begin{itemize}
\item 21 Sentences to IDOC from Cook County for violations of Illinois’ Controlled Substances Act fell from 3,752 in SFY 2010 to 1,380 in SFY 2019.
\item 22 Source: Analyses by Loyola’s Center for Criminal Justice Research, Policy & Practice of aggregate, published I-UCR data.
\item 23 Between 2001 and 2018, arrests for drugs other than cannabis in Cook County decreased by 29,009 arrests, from 42,818 to 13,809. Between 2001 and 2018, arrests for drugs other than cannabis in Chicago decreased from 34,609 to 10,604 based on analyses of data provided through the Chicago Police Department data portal. Three police districts accounted for 41% of the overall decrease in these felony drug arrests in Cook County between 2001 and 2018, including Districts 2, 11, and 15. During that same time period, admissions to prison from Cook County for these drug offenses decreased from 6,742 in 2001 to 1,380 in 2019. Combining the drop in arrests in the three police districts with the drop in admissions to prison for drug offenses from Cook County, it is estimated that this drop in drug arrests from these three districts is responsible for 2,198 (41%) of the 5,362 fewer sentences to prison for drug offenses from Cook County between 2001 and 2019. Statewide, between 2001 and 2019, there were 7,286 fewer sentences to prison for \textit{all} crimes. Thus, the estimated 2,198 fewer admissions due to fewer drug arrests in these three police districts accounts for 30% of the statewide decrease in total admissions to prison between 2001 and 2019.
\item 24 Source: Administrative Office of Illinois Courts Annual Report. Data for 2013-2018 were provided by the Cook County State’s Attorney’s Office due to apparent data reporting issues in the AOIC annual report from Cook County for those years. \end{footnotesize}
decreased from 39% in 2010 to 31% in 2018. Even after statistically controlling for the influence of the conviction offense and offender characteristics, the odds of being sentenced to prison in Cook County are higher when compared to Illinois as a whole. Importantly, the overall Index crime rate declined consistently across Illinois’ counties regardless of whether their utilization of prison decreased (as it did in most large counties) or increased.

**Figure 9. Percent of Individuals with a Felony Conviction in Cook County Sentenced to Prison**

Detailed analyses of the characteristics that influenced the imposition of prison sentences on those convicted of a felony in Cook County using CHRI data\(^{25}\) revealed that the three most influential factors were the defendant receiving credit for time served in jail,\(^{26}\) if the defendant had prior prison sentences and if they had prior convictions. Within the sample examined of those arrested and ultimately

\(^{25}\) Source: Analyses by Loyola’s Center for Criminal Justice Research, Policy & Practice of aggregate, published data from the Administrative Office of the Illinois Courts’ Annual reports. * 2013-2018 data provided by the Cook County State’s Attorney’s Office.

\(^{26}\) Although CHRI does not capture a defendant’s pretrial status, a proxy measure was created that captures whether a convicted defendant received any credit for time served. CHRI only captures credit for time served when an individual is sentenced; in such instances, CHRI reports how many days of credit for time served the individual received as part of the imposed sentence.
convicted of a felony-level offense during the 2012 to 2014 period, 57% were sentenced to prison overall. However, of those who had previously been sentenced to prison, 81% received a prison sentence for the current conviction, compared to 40% of those who had never previously been sentenced to prison.

Changing Correctional Populations

There are three possible jurisdictions under which people convicted of a felony and serving their sentence in Cook County can be supervised: in prison, on probation or on Mandatory Supervised Release (MSR or “parole”). Increases in crime and arrests during the 1980s and 1990s, coupled with the changing sentencing practices for those convicted of a felony in Cook County in the past decade described above, have led to changes in the number of those convicted of a felony under the custody of the criminal justice system in/from Cook County.

As described above, since the early 2000s, the majority of those convicted of a felony in Cook County have been sentenced to prison, not probation. Indeed, Cook County is one of the few counties in Illinois where this is the case. Between the late-1980’s and early 2000’s, the number of those convicted of a felony on probation in Cook County increased dramatically. In 1988, 16,723 people convicted of a felony were on probation in Cook County; by 2003, the number had risen to 25,929, a 55% increase (Figure 10).27 Despite this increase in overall numbers, however, the percentage of those convicted of a felony on probation actually declined during this time period due to the increased likelihood of those convicted of a felony receiving prison sentences. In 1988, the 16,723 people convicted of a felony on probation in Cook County represented 43% of all those convicted of a felony from Cook County under the custody of the criminal justice system (e.g., on probation, in prison or on MSR/parole). By 2003, 37% of those convicted of a felony under the custody of the criminal justice system were on probation, and by 2018, only about one-third (35%) of those convicted of a felony from Cook County under the custody of the justice system were on probation. By comparison, outside of Cook County, 50% of individuals convicted of a felony under the custody of the criminal justice system were on probation in Illinois in 2018.

The long-term trends in the number of individuals in prison from Cook County, as a result of either being sentenced to prison or being returned to prison as a technical MSR violator, increased dramatically during the 1990s through early 2000s as a result of increases in crime, arrests, and the proportion of those convicted of a felony being sentenced to prison during much of that time period. At the end of the state fiscal year (SFY) 1990 there were fewer than 17,056 adults in Illinois’ prisons

from Cook County, but by the end of SFY 2010 there were 23,985 (Figure 10).\textsuperscript{28} However, as a result of less crime, fewer arrests and court filings for felony offenses, and a decrease in the percent of convicted felons being sentenced to prison since 2010, the number of people from Cook County in prison has also decreased in recent years. The number of people in prison from Cook County in SFY 2019 was 18,078 or 25% lower than at the end of SFY 2010. By comparison, the number of people in prison at the end of SFY 2019 from Illinois outside of Cook County was 10% lower than at the end of SFY 2010. Of the 48,046 individuals convicted of a felony under the custody of the justice system (including probation, prison and MSR) from Cook County at the end of 2018, 40% of them were incarcerated in an Illinois state prison.

**Figure 10. Prison, Felony Probation, and “Parole” (MSR) Population in Cook County**

![Graph showing population trends in Cook County](image)

of them were being supervised by IDOC parole agents in Cook County. Generally, the number of people on MSR in Cook County has followed the trends in releases from IDOC, which is influenced by the admissions in previous years (Figure 10). Thus, when the number of those in prison is combined with those on MSR in Cook County, about two-thirds (65%) of those sentenced for a felony from Cook County and under the jurisdiction of the justice system in 2018 were under the custody/supervision of IDOC, with the remainder on probation.

Reentry and Recidivism of Those Released from Prison Who Return to Cook County

An important tenet within the area of sentencing and prison populations is that almost everybody sentenced to prison will eventually be released from prison. Although individuals convicted of murder serve long sentences, these individuals account for a very small percent of all admissions to prison. In Cook County, for example, less than 2.5% of all the admissions to prison from Cook County between SFY 2010 and 2019 were for murder. In general, individuals who are sentenced to prison from Cook County return back to Cook County upon their release. Among those returning from prison to Cook County between SFY 2011 and 2015, 86% were originally sentenced to prison in Cook County. Further, of those released from prison and returning to Cook County, the majority returned to specific areas within Chicago. Indeed, 32% returned to a contiguous group of neighborhoods on the west-side of the city. Most inmates released from prison return back to where they lived prior to prison, usually living with family members or friends.

However, it is also important to keep in mind that most individuals sentenced to prison from, and returning to, Cook County, were not incarcerated in prisons in close proximity to Cook County/Chicago. In fact, only 36% of the inmates who returned to Cook County from prison were housed in correctional centers in IDOC’s Northern District of Illinois, limiting the ability of family members and community organizations that could support re-entry and reintegration from maintaining or establishing positive relationships and contact with those in prison.

Of particular concern for many, and one of the measures used to gauge the effectiveness of correctional interventions, is the degree to which those processed through the criminal justice system recidivate, or continue to engage in criminal behaviors. Although measuring someone’s involvement in criminal behavior is difficult, given that such a large portion of crimes are not reported or known to the police, one way that recidivism has been measured is whether or not someone is rearrested for a new crime following the imposition or completion of their sentence. To examine recidivism in Cook County,

30 Source: Analyses by Loyola’s Center of Research, Policy and Practice of data provided by the Illinois Department of Corrections’ Planning and Research Unit and CHRI data generated and provided by the Research and Analysis Unit, Illinois Criminal Justice Information Authority.
data were collected and analyses were performed to determine the rate and patterns of rearrest among those released from IDOC between SFY 2011 to 2014 who returned to Cook County. These analyses revealed that, overall, 68% of those released from prison were rearrested for any type of crime within three years of their release, a rate slightly higher than that seen in Illinois as a whole (Figure 11). Consistent with prior research on the topic, the releasee’s age and criminal history were the two strongest predictors of whether or not they were rearrested: younger individuals and those with more extensive criminal histories had the highest recidivism rates.

**Figure 11. Examining Recidivism of Adult IDOC Releasees Returned to Cook County**

![Pie chart showing recidivism rates]

- **No New Arrest, 32%**

Often, when the public hears or thinks about prison releasees committing new crimes, offenses such as murder or shootings come to mind. It is important to note that most of those that were arrested following their release from prison were arrested for non-violent crimes. Twenty-two percent of those who returned to Cook County from prison were arrested for a violent crime within three years of their release, and a significant portion of these arrests involved crimes of domestic violence. Specifically,

31 During the same time period, 58% of those released from prison to any county in Illinois were rearrested within 3 years of release

32 Source: Analyses by Loyola’s Center of Research, Policy and Practice of data provided by the Illinois Department of Corrections’ Planning and Research Unit and CHRI data generated and provided by the Research and Analysis Unit, Illinois Criminal Justice Information Authority.
9% of Cook County releasees from IDOC were arrested for a domestic violence offense, while 13% were arrested for some other type of violent crime (Figure 11). This 9% domestic violence recidivism rate among those released to Cook County was slightly lower than the 11% rate seen among those released from prison in the rest of Illinois. Domestic violence is a serious offense and arrests for domestic violence may have significant implications for MSR supervision and revocation, since under Illinois law anyone on MSR who is rearrested for a domestic violence offense must have a warrant issued to revoke their MSR and be returned to prison as an MSR violator. Finally, a small percent of those released from prison and returned to Cook County (4%) were arrested for the illegal possession of a firearm.

Conclusions and Future Research

The analyses presented in this report highlight some of the major trends and issues within the Cook County criminal justice system. Although there was an increase in both property and violent crime in Cook County between 2015 and 2016, for the rest of the period over the past 15 years, crime has decreased fairly consistently. This trend is consistent with what has been seen across the country, and in the rest of Illinois.

As a result of the overall decrease in crime in Cook County, and evident shifts in drug enforcement practice since the 1990s, arrests in Cook County have also decreased in the past 10 years, resulting in fewer criminal court filings. With fewer court filings, the number of individuals convicted of a felony sentenced to prison and probation in Cook County has decreased. Further, in recent years, the proportion of persons convicted of a felony sentenced to prison (rather than probation) in Cook County has decreased. Despite the fact that the percent of convicted felons sentenced to prison in Cook County was below 50% in 2018 for the first time since 2001, the percent of people convicted of a felony sentenced to prison in Cook County is still considerably higher than the rest of Illinois. This recent trend of greater reliance on probation is similar to the rest of Illinois. Indeed, one of the recommendations by leading scholars and practitioners in the field is that strengthening probation is one of the critical elements needed to reduce the reliance on incarceration as a primary response to crime.
